

# Security Solutions for Corporate Infrastructure

*"We have always been impressed by them; the projects are top quality, delivered on time and on budget. I have no hesitation in referring Sentinel Group to any interested party."*

**DE LA RUE, KENYA**

# Sentinel Group deliver effective security against today's threats

Corporate Management face an incredibly difficult task when considering how to protect against the threats posed by terrorism, organised crime and civil unrest. Mitigating these threats effectively requires experienced planning and a comprehensive security solution; not doing so can have severe consequences for the organisation and its employees.

Naturally, the responsibility should be first and foremost on mitigating potential harm to employees. The business could also suffer harm from significant financial losses due to operational disruption or catastrophic property damage. If the organisation fails to take appropriate protective measures, this could lead to increased insurance costs, problematic staff recruitment and retention issues.

Sentinel Group understand the challenges faced by Corporate Management in minimising the risks posed by today's known threats.

Using only premium quality, proven and certified products, Sentinel Group has extensive experience providing corporate infrastructure security solutions. We provide a turnkey service from initial site security survey to final installation and handover, ensuring minimal disruption to your business. Comprehensive training programmes complement the newly installed measures to guarantee the optimum security solution is always delivered.

Sentinel Group is a fully vetted member of The Business Integrity Initiative (BII); an index of Kenyan companies who are committed to ending corruption and bribery in Kenyan business. We do business with integrity and have a track record of working ethically with UK organisations and British Chamber of Commerce Kenya (BCKK) members.

## Sentinel Group understand how to effectively protect against terrorist threats

The Sentinel Group mission is to protect life; from providing simple safe zones within the family home to providing comprehensive physical security solutions for international businesses and government facilities.

Incorporated in 2015, our strong leadership team has extensive experience within the defence and security industries, including considerable military experience served both in Kenya and overseas.

Every project begins with a comprehensive physical security assessment to determine which measures are required and the most suitable products to mitigate against the potential threats.

Once the threat level has been determined, appropriate protective measures can be considered - such as constructing 'safe zones' for employees or vehicle mitigation measures. Additionally, Sentinel Group can provide comprehensive emergency training for the new security infrastructure and to ensure maximum protection for you and your employees.

## A proven portfolio of first-class infrastructure security products

Sentinel Group has a successful track record of providing premium corporate security infrastructure solutions for domestic and corporate clients throughout East Africa. We understand that protecting corporate infrastructure presents unique challenges; employees must be as well protected as possible, but without impairing the ability of the business to function normally.

A carefully selected portfolio of tested and proven security products by internationally renowned manufacturers such as Trelidor and HESCO Bastion enables Sentinel Group to deliver the optimum security solutions to protect your employees and infrastructure from harm.

All products provided by Sentinel Group are 'turnkey' solutions, and encompass everything from scoping and defining the requirement, to design and final implementation - including testing and commissioning.

## Ballistic Security Film & Bullet Resistant Glass

Ballistic Security Film is a strong, adhesive-backed clear film used on glass and is an excellent means of preventing intruders gaining entry by breaking the glass.

In the event of an explosive attack Ballistic Security Film also prevents dangerous shards becoming airborne and injuring the building's occupants. The most robust security films are capable of preventing fragmentation and the production of hazardous glass shards from forces such as bomb blasts. Sentinel Group supplies 3 strengths of Film; 4, 7 & 12 Micron films.

Bullet Resistant Glass (BRG) is manufactured from a specific number of layers of glass depending on the level of threat determined. Sentinel Group can provide and install BRG as part of an upgrade to any security infrastructure.

## Expeditionary Infrastructure

Using teams of highly skilled, technical personnel trained to recognised international standards, Sentinel Group can quickly and efficiently deliver all types of expeditionary infrastructure - especially in remote and challenging locations.

Whether the requirement is for ground works, chain link fencing, relocatable buildings or temporary camps, Sentinel Group have the experience and understanding to deliver the optimum expeditionary camp infrastructure into austere environments throughout East Africa.

## Perimeter & Main Entry Point Security

Since 1991, HESCO has been a world leader and innovator in the design and manufacture of rapidly deployable barrier systems, saving countless lives and millions of dollars worth of critical assets.

Sentinel Group has extensive expertise of the design and construction of these types of perimeter and entry point security measures.

ISO-accredited HESCO Mil units are used to construct perimeter walls. These flat-packed, steel-mesh, geotextile-lined baskets are easily positioned and then filled with sand or aggregate to form an impenetrable, blast-proof and vehicle-proof barrier.

Main Entry Points can range from a simple barrier to a high-threat rated bollard capable of stopping a 7.5 tonne vehicle travelling at speed.

HESCO is ISO 9001 accredited.

## Sentinel Group only specify Trellidor products for corporate door and window security projects

Trellidor is the leading global manufacturer of customised security solutions for corporate and domestic environments.

With headquarters in Durban, South Africa, Trellidor are present in 26 countries worldwide. The company has an unrivalled reputation for the design and manufacture of ISO-accredited roller shutters and security barriers.

Designed and manufactured to high standards, Trellidor offer a wide variety of security solutions, from automated aluminium rollershutters to steel retractable grills including fixed barriers for your windows - all expertly installed by the trained Sentinel Group team.

With exclusive rights to the sale of Trellidor products throughout Kenya, you can be assured that only genuine Trellidor products are specified, supplied and fitted to your premises.

All genuine Trellidor products now have up to 5 year international warranty. Terms & conditions apply.

## Double-Skinned Automated Aluminium Rollershutters

From automated aluminium high security rollershutters, to LPCB Level 3 ultra high security retractables and fixed aluminium or steel fixtures. Automated aluminium security rollershutters are lightweight but very strong, with compact and neat motor box housings.

Easy to operate with the fully automated Trellidor motor, a safe zone can be secured by lowering the barrier in under 25 seconds - either by remote control or control room switch. The roller housing can be fitted into ceiling cavities to hide all fixings and reduce motor noise.

In addition to resisting high-risk attack, these shutters provide excellent insulation, noise control and protection from the elements. There is also a choice of slat design offering varying degrees of light and air access.

## Retractable Door & Window Security

Fully framed with a neat and compact sash, galvanised steel trellis-patterned security barriers are ideal for doors, windows and other openings.

Several models are available with additional strengthening features and fitted with a patented Trellidor locking system for improved anti-intruder strength.

## Fixed Window Security

Fixed security bars for windows are manufactured using a combination of aluminium and reinforced steel inside the uprights and cross sections for increased resistance.

Trellidor Fixed Security products are premium quality, fully framed window security barriers, custom made to match existing cottage pane windows or for creating a cottage pane effect.

## Polycarbonate Window Bars

Polycarbonate Bars provide attractive, transparent window protection and are ideal for offices that don't require highly visible burglar proofing.

Manufactured from transparent polycarbonate panels that can be adjusted to block out intruders. Neat design and strengthening features provide you with protection as well as an attractive, see-through installation.

*"Sentinel Group delivers proven, quality products across East Africa to a variety of internationally recognised clients. By utilising in-depth, first-hand knowledge and a wealth of experience, we ensure our customers always receive the highest standard of professional security advice - something which underpins our product offering and fulfils the company's mission of protecting you, your business and your personnel."*
